

What is Airwall?

Airwall makes every 'thing' invisible

Airwall™ makes 'things' on a network invisible and protects against cyber-attacks. Airwall is a comprehensive solution that is exceptionally effective at protecting critical physical infrastructure, while still allowing secure remote access.

Airwall Solutions extend to cloud, virtual, and physical environments. Secure every endpoint in your network, from local data center to global infrastructure. Provide global connectivity and mobility for your entire workforce, wherever they are and for whatever they need to reach, securely.

Airwall Solution components

① Protect your 'things'

**Airwall
Agent**

**Airwall
Server**

**Airwall
Gateway**

② Connect your 'things'

**Airwall
Relay**

③ Manage your 'things'

**Airwall
Conductor**

Protect your ‘things’

Airwall Agent

Airwall Agents are applications installed on devices (Windows, macOS, iOS, iPadOS, and Android) that enable zero-trust network access (ZTNA) from anywhere in the world. By default, all communications are encrypted end-to-end and multi-factor authenticated (MFA), enforcing a software-defined perimeter (SDP) at the distributed edge.

Deployment Options:

Windows 7/8/10 (32/64-bit)	macOS 10.14 & above	iOS/iPadOS 12.0 & above	Android 6.0 & Above
--------------------------------------	-------------------------------	-----------------------------------	-------------------------------

Airwall Server

Airwall Servers support Windows Server and Linux and behave much like Airwall Agents. They effectively make servers invisible and only allow communication with authenticated and authorized endpoints (ZTNA). Air-gap servers from unauthorized communication with a software-defined perimeter (SDP).

Deployment Options:

Windows Server 2008 R2 2012 R2 2016	Linux CentOS 6.9 and 7 Ubuntu 16.04 Fedora 25 (REHL compatible)
---	---

Airwall Gateway

Airwall Gateways protect ‘things’ downstream. They are deployed in front of devices or hosts that cannot protect themselves. Examples include legacy systems and machines, or when customers are unable to install Airwall Agent or Airwall Server.

Deployment Options:

Cloud Amazon Web Services Microsoft Azure Google Cloud	Virtual VMware ESXi 6.0 & above, Microsoft HyperV Server 2012 R2 & Above	Physical 75 Series 150 Series 250 Series 500 Series	Connectivity Wired Cellular Wi-Fi
--	--	--	---

Connect your ‘things’

Airwall Relay

Airwall Relay routes encrypted communications between all your ‘things’ across all networks. Reduce network complexity and enable complete connectivity between every endpoint, without modifying the underlying network. Wherever that endpoint is and however that endpoint is online, it can be connected.

Deployment Options:

Cloud Amazon Web Services Microsoft Azure Google Cloud	Virtual VMware ESXi 6.0 & above, Microsoft HyperV Server 2012 R2 & Above	Physical 500 – 1U Platform 250 Series
--	--	--

Manage your 'things'

**Airwall
Conductor**

Airwall Conductor enforces visibility and access policy for all your 'things' with point-and-click simplicity. Make your 'things' invisible by creating a software-defined network (SDN) that's micro-segmented, encrypted end-to-end, and multi-factor authenticated (MFA).

Deployment Options:

Cloud

Amazon Web Services
Microsoft Azure
Google Cloud

Virtual

VMware ESXi 6.0 &
above, Microsoft HyperV
Server 2012 R2 & Above

Physical

Conductor – 1U Platform
(software)

Airwall delivers defense-in-depth

1 Zero-Trust Network
Access (ZTNA)

2 Software-Defined
Network (SDN)

3 Software-Defined
Perimeter (SDP)

4 Multi-Factor
Authentication (MFA)

5 Micro-segmentation
for Every Endpoint

6 Lateral Movement
Eliminated
